Portfolio: <https://portfolio-bfu1.vercel.app/>

SUMMARY

Aspiring AI/ML Engineer with hands-on experience building and deploying end-to-end machine learning and time-series forecasting applications. Strong foundation in Python, Scikit-learn, TensorFlow, and PyTorch, with real-world exposure to AutoML, Streamlit dashboards, and cloud-based ML deployment. Interested in applying AI to sustainability, EV analytics, and intelligent multi-agent systems.

EDUCATION

Bachelor of Technology in Computer Science and Engineering

JIMS Engineering Management Technical Campus, Delhi NCR | Affiliated to GURU GOBIND SINGH UNIVERSITY (IPU)

📅 2022-2026

📍 Delhi NCR

Current CGPA: 8.2/10.0

SKILLS

- **Programming & Scripting:** Python (NumPy, Pandas, ML)
- **Machine Learning:** Regression, Classification, Time-Series Forecasting, Model Evaluation & Cross-Validation, AutoML, Agentic AI Basics
- **Data Analysis & Visualization:** EDA, Statistical Analysis, Visualization (Matplotlib, Seaborn)
- **MLOps & Deployment:** Streamlit, Model Deployment, REST APIs (basic), IBM Cloud, Watsonx.ai AutoAI
- **Tools & Platforms:** Jupyter Notebook, Google Colab, Git, GitHub, Streamlit, IBM Watsonx.ai
- **Languages:** English, Hindi

INTERNSHIPS & PROFESSIONAL TRAINING

AI & Data Analytics Intern (Green Skills) | AICTE – Shell India – Edunet Foundation | Virtual
Jul 2025 – Aug 2025

- Applied data analysis and machine learning techniques to sustainability-focused use cases under the Skills4Future program.
- Performed data preprocessing, exploratory data analysis (EDA), and feature engineering on environmental datasets.
- Built and evaluated ML models to derive insights for green skill initiatives and impact-driven decision-making.

AI & Cloud Technologies Intern | IBM SkillsBuild – Edunet Foundation | Virtual
Jul 2025 – Aug 2025

- Worked with IBM Cloud and **Watsonx.ai AutoAI** to build, train, and optimize machine learning models.
- Developed AI-powered chatbot prototypes and conducted AutoML experiments for model selection and evaluation.
- Completed a capstone project involving the design, evaluation, and deployment of an AI/ML solution for a real-world problem.

Agentic AI: AI Agent Architect Training | CSRBOX – IBM SkillsBuild | Virtual

- Completed structured training on Agentic AI concepts, focusing on AI agent architecture and design patterns.
- Gained hands-on exposure to building **multi-agent systems**, transitioning from theoretical AI concepts to practical implementations.

PROJECTS

EV Adoption Forecaster | Time-Series Forecasting & Deployment

- Built an end-to-end machine learning application to forecast future EV adoption trends using historical data from Washington State.
 - Engineered time-series features (lag variables, rolling means) and trained a Gradient Boosting Regressor achieving low RMSE for 3-year EV adoption forecasts across multiple counties.
 - Developed and deployed an interactive Streamlit dashboard enabling users to visualize 3-year county-wise forecasts and compare regional growth trends.
 - **Use Case:** EV infrastructure planning and policy decision-making.
 - **Tech Stack:** Python, Pandas, Scikit-learn, Streamlit, Matplotlib
 - **Links:** [Live Application](#) | [GitHub Repository](#)
-

Predictive Maintenance for Industrial Machinery | Classification & Cloud Deployment

- Developed an end-to-end machine learning solution to predict equipment failures using industrial sensor data.
 - Utilized IBM Watsonx.ai AutoAI to automatically build, train, and optimize multiple models; selected a Gradient Boosting Classifier achieving 99.6% accuracy in predicting equipment failures.
 - Identified critical failure predictors such as Torque, Rotational Speed, and Tool Wear to enable proactive maintenance scheduling.
 - Deployed the final model as a live web service on IBM Cloud for real-world scalability.
 - **Tech Stack:** Python, IBM Watsonx.ai, AutoAI, Scikit-learn, Pandas
 - **Links:** [GitHub Repository](#)
-

Conscious Cart | AI Shopping Assistant (Multi-Agent System)

- Collaborated on building an AI-powered shopping assistant to enhance e-commerce decision-making using LLMs.
 - Contributed to the development of a multi-agent system that compares products, tracks prices, and generates intelligent cart suggestions.
 - Integrated web scraping and LLM-based reasoning to improve recommendation relevance and user experience.
 - **Tech Stack:** Python, LangGraph, BeautifulSoup, OpenAI API, Streamlit
 - **Links:** [Live Application](#) | [GitHub Repository](#)
-

ACHIEVEMENTS AND CERTIFICATIONS

- IBM SkillsBuild – AI & Cloud Technologies
- Microsoft Learn Student Ambassador
- Google AI Learning Program
- Forage – Data Analytics Job Simulations

CURRENTLY LEARNING

- Advanced Time-Series Models (ARIMA, Prophet, LSTM)
- Multi-Agent AI systems using LangGraph
- Deep Learning fundamentals, including CNNs (TensorFlow, PyTorch)
- ML model deployment and optimization

INTERESTS

- AI applications in sustainability and Data analytics
- Data visualization and ML experimentation
- Open-source contributions
